

What is a Through-Floor Lift?

As the name suggests, these lifts simply go through the floor, requiring no dedicated lift shaft.

The design and installation of through-floor lifts is simple but they are also very powerful, designed to be able to carry up to 250kg.

They are available in a wide range of sizes and styles to suit your needs, or if you want to get creative we can tailor almost every aspect of the design to your specifications, just ask!

The Benefits of Through-Floor Lifts

Easy to Install:

With its simple design, a through-floor lift can be installed in as little as one day, once minor building work is complete.

No Stairway Obstruction:

With a through-floor lift, you need not worry about a stairlift obstructing your stairs.

No Lift Shaft:

Through-floor lifts do not require the construction of a lift shaft which has many benefits (for example our smallest model of lift takes up less than 0.9m² of floor space)!

No Need to Move:

With a through-floor lift, you can stay in your home without having to worry about downsizing or living on a single floor. You can continue to access the whole of your home with a Wessex Lift.

Other Solutions We Offer

We also make a wide range of low rise platform lifts, suitable for indoor and outdoor use, and we happily offer these with a Sabbath option too!
